

ErgoMax Group Management Plan

1. Initial and Evolving Management Roles

The leadership structure of ErgoMax is designed to smoothly transition the division of responsibilities across the product's lifecycle. During the startup phase, the company operates under a collaborative and fast decision making framework where duties overlap to meet the immediate development needs. Core responsibilities and duties remain distributed through specialized executive officer positions:

- **Chief Executive Officer (CEO) William Chambliss:** Oversees project timelines and keeps the schedule on track. Handles delegation, defines target market, and makes the final decision on any leadership disagreements.
- **Chief Financial Operating Officer (CFOO) Aliza Ziauddin:** Manages corporate resource allocation, corporate operations, pricing strategies, production logistics, and procurement workflows.
- **Chief Research Officer (CRO) Tyler Wadlington:** Leads continuous ergonomic research, user and customer interviews, and strategic patent workarounds.
- **Chief Technical Officer (CTO) George Lewis:** Directs software and firmware architecture, physical circuit builds, and sensor telemetry integration.
- **Chief Product Officer (CPO) Julia Downs:** Designs human to product interactions, software interfaces, haptic alert logic, and final aesthetic and packaging styles.

These roles are based on the different intersections of product development, which are known as desirability, feasibility and viability. Each officer represents a different intersection that maximizes their strengths and minimizes their weaknesses.

Desirable. Viable. Feasible.

As ErgoMax matures and expands, management roles will continually evolve:

- Growth Stage:** The original founders will shift from a more individual contribution role to a role in managerial leadership. As the organization scales and new hiring occurs, departments will place new hires under the guidance of their respective C-suite leads.
- Maturity Stage:** The founding team will remain in executive management, which includes steering operations while also expanding the product line portfolio beyond the initial PostureMax device to capture broader wellness demographics.
- Decline Stage:** Rather than letting the company stagnate, the founders will use engineering expertise and corporate knowledge to innovate. The continual goal of engineering new systems of passive ergonomics technologies will be kept at the forefront.

2. Work Environment and Workplace Culture

The setting of ErgoMax balances startup scrappy efficiency with distraction free environments designed for delivering the customer needs.

The company's headquarters is split into a two phased trajectory planned around graduation milestones and nearby tech hubs:

- **Immediate Launch: Auburn, AL.** To minimize any unnecessary cost, ErgoMax will operate out of Auburn Alabama. This location will allow for access to engineering student infrastructure while also leveraging institutional connections with physical therapy, electrical engineering and industrial engineering departments.
- **5–10 Years Out: Atlanta, GA.** Following graduation, HQ will relocate to a regional tech hub. This move places the company at the center of major corporate B2B wellness procurement, health-tech innovation talent, and medical/physical therapy research institutions.

An investor or strategic partner visiting the Auburn office will observe a highly resourceful hardware/software lab setup. The workspace contains a blend of free and cost-effective spaces, including family owned tools and advanced university development resources such as the Auburn MakerSpace. The setup displays rapid prototyping capability over normal corporate luxury. The day-to-day work environment blends technical focus and team camaraderie outside of the designated deep work blocks. Founders often spend time together outside office hours. Within the workplace, a communications protocol is followed to ensure constant productivity:

- **Deep Work Windows:** Verbal brainstorming or general conversation is restricted to scheduled time blocks throughout the day.
- **Focused 1-on-1 Communication:** Interaction is restricted to necessary one-on-one professional talks, which are also encouraged to be kept to a minimum to dilute constant distraction.

The overall atmosphere inside the facility is intensely focused yet flatly egalitarian, a high concentration engineering hub during execution blocks that shifts into a high collaborative space during breaks. This structure ensures that creativity isn't killed by corporate jargon, while protecting the space required for complex firmware and hardware engineering.

If an early engineering or sales employee were to summarize the corporate culture at ErgoMax in a single tweet, it would read: "Head down, building the future of passive health-tech with an elite crew. Total focus inside the lab, great jokes, and better people outside it."

3. Hiring, Firing, and Organizational Structure

ErgoMax maintains a lean philosophy that prioritizes talent over general headcount. New hire recruitment relies heavily on university-based networks, University events, and professional recommendations within engineering and physical therapy spaces. The company avoids hiring generic clones. Recruitment focuses on seeking out individuals who bring different perspectives, backgrounds, and problem-solving styles rather than identical thinkers. Final hiring decisions across all departments are the sole responsibility of the CEO.

- **Initial Team Size:** 5 core founders in order to keep a lean resource deployment
- **First External Hire:** Head of Sales
- **First Hire Description:** Responsible for enterprise B2B wellness campaigns and establishing distribution partnerships with commercial office furniture manufacturers.

The firing policy balances a people first mindset with strict cultural boundaries:

- **Performance Management:** In order to align with the values of long-term health and growth, any employee struggling to meet performance benchmarks will enter a formal Performance Improvement Plan (PIP). This 60 day window provides measurable milestones combined with mentorship. If the individual fails to improve despite structured support, they are let go.
- **Cultural Alignment:** ErgoMax maintains a zero-tolerance policy regarding toxic behavior, office politics, or direct violations of core organizational values. Cultural misalignment results in termination as fast as possible in order to maintain corporate health.

4. Stakeholder, Peer, and Partner Dynamics

The distribution of authority within ErgoMax is built to maintain founder equity and execution decisions.

The internal management creates vertical leadership and democratic distinctions for company choices:

- **Executive Allocation:** William Chambliss retains formal authority over general operational direction, milestones, and high-level delegation.
- **Voting Mechanisms:** All five founding members hold equal authority within the C-suite council. Major corporate actions, capital uses and constitutional amendments require a minimum majority vote to pass in order to eliminate deadlock risks.

To ensure an organized corporate face, all stakeholder communications are through established pipelines:

- **Strategic Partnerships, Investors, & Outside Board Members:** Handled completely by Julia Downs (CPO), who holds external relations and guides investor interfacing.
- **Component Purchasing and Procurement:** Handled by Aliza Ziauddin (CFOO) in direct coordination with program advisors and professors to process component purchase orders.

The executive team will maintain a quarterly reporting cadence, delivering standardized health metrics, financial rates, and hardware milestone updates to the board. While ErgoMax utilizes the networks of physical therapy advisors and institutional partners for market use, the core founding team retains absolute control over the product roadmap. Investors are treated as advisors rather than directors, ensuring the integrity of the PostureMax system remains uncompromised by short-term capital excuses.

5. Public Persona, Media Strategy, and Long-Term Horizon

ErgoMax aims to project a sleek, science-backed, yet trendy public image that positions posture tracking as a lifestyle rather than a clinical chore. Julia Downs (CPO) serves as the primary public face and symbolic representative of ErgoMax. Our leadership execution is explained by similarities to deep engineering philosophy of tech titans like Tony Fadell, along with the metric-driven storytelling of founders like Steven Bartlett.

- **Branding Point of View:** The public branding avoids dry, corporate spreadsheets. Julia is positioned as a design-focused visionary who bridges the gap between complex engineering, sensor telemetry, and human comfort.
- **Market Inspiration Models:** The brand architecture takes cues from industry pioneers:
 - Chirp: Adopting their hyper-focused, professional-grade approach to direct physical relief tools.
 - Abglo: Drawing from their agile posture training roots.
 - Whoop: Modeling their trendy, highly detailed, growth-oriented, data-rich analytical tracking presentation.

The company's relationship with the press is deliberate and media-friendly, aiming to create a cultural conversation regarding workplace health risks. Julia Downs handles all press interactions. The corporate narrative states: "Modern life forces people into destructive, seated postures for hours on end, causing chronic musculoskeletal damage with few non-invasive solutions. ErgoMax resolves this growing epidemic through PostureMax: a non-intrusive, easy-to-use, deeply applicable, and growth-centered device that seamlessly integrates passive, environmental intelligence into everyday life to sustainably rebuild long-term muscle memory."

The founders' relationship with the firm is mapped across a 20-year trajectory focused on building corporate value and achieving a clean exit:

- **5 Years:** Original founders operate as executives driving market share. William manages scale operations, Julia drives dominant media capture, and the sales team captures high-volume B2B corporate wellness contracts to maximize acquisition attractiveness.
- **10 Years:** Following a corporate buyout, the founders transition into division leaders within the parent conglomerate. They commit to a 3 year operational transition window, scaling the PostureMax system via the acquirer's enterprise distribution networks.

- **20 Years:** The founders achieve complete financial exits. The team transitions out of daily operations to serve on advisory boards, act as angel investors for generations of student startups, or leverage their capital to launch next-tier wellness entities.

6. Corporate Exit Strategy

The long-term objective for ErgoMax is not an IPO or conversion into a permanent multi-generation family business, it is a definitive and strategic acquisition. ErgoMax will purposefully position its technology, data pipelines, and enterprise accounts to target a major ergonomic furniture corporation or global health-tech conglomerate such as Steelcase, Herman Miller, or a specialized healthcare enterprise.

The choice of acquirer must heavily align with specific core operational values:

- **Long-Term Health and Wellbeing:** The buyer must show a clear corporate dedication to preventative human ergonomics over short-term consumer trends.
- **Growth Mindset:** The parent company must possess the capital and scale mindset required to integrate PostureMax software into global corporate infrastructure.
- **Real Results vs. Symptom Masking:** The acquirer must value the core biofeedback methodology of ErgoMax. This alignment ensures the technological integrity of PostureMax is preserved and deployed to help people on a global scale.
